

Survey of actually operational applications

The participant to project RESINE should complete the following items about his own ongoing operational applications.

The specified activities should be typically pursued by established partnerships between academic specialist teams (from Universities or research centers) and:

- energy producers or distributors
- industrial or agro-industrial establishments
- residential establishments
- energy conversion equipment providers or manufacturers

where the energy converter, the co-generator, the energy-efficient building, the local distribution grid, etc. are operational or anyhow available

List of items to be completed (Please provide a short description, max 20 lines and 5 pictures, of each ongoing operational activity, specifying the geographical site, the technological infrastructure, the energy-related characteristics, etc):

Solar energy (thermal and photovoltaic)

Wind energy

Biomass

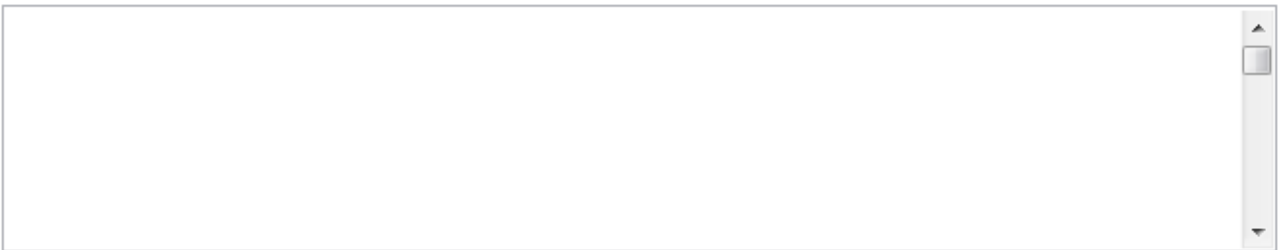

Biofuels

A large, empty rectangular text area with a vertical scrollbar on the right side, intended for input related to Biofuels.

Energy conversion and utilisation

A large, empty rectangular text area with a vertical scrollbar on the right side, intended for input related to Energy conversion and utilisation.

Others
