

Survey of ongoing research programs

The participant to project RESINE should complete the following items about his own ongoing research programs.

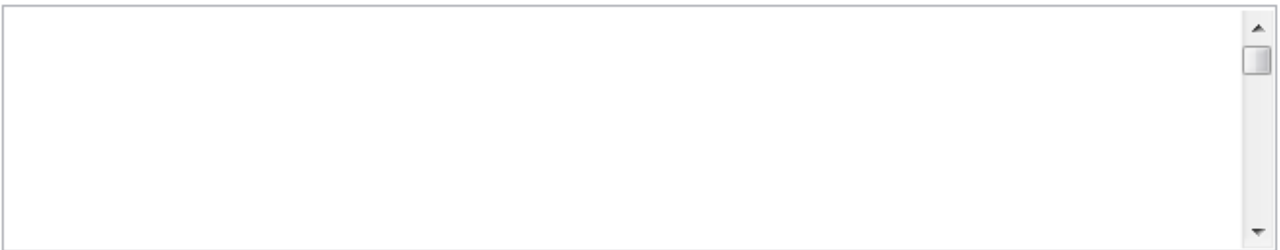

The specified activities should be typically pursued within an academic department, laboratory or research-center environment.

List of items to be completed (Please provide a short description, max 20 lines and 5 pictures, of each ongoing research program, specifying the research organization, the technological infrastructure, the energy-related characteristics, etc):

solar energy (thermal and photovoltaic)

A large rectangular text area with a vertical scrollbar on the right side, intended for a short description of solar energy research.

wind energy

A large rectangular text area with a vertical scrollbar on the right side, intended for a short description of wind energy research.

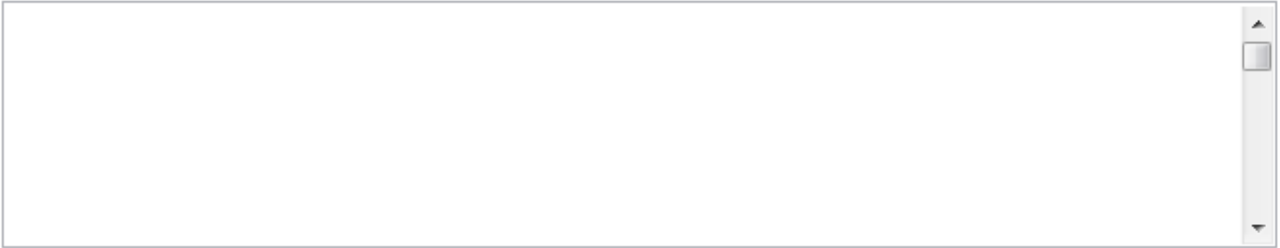

biomass (from wood and herbaceous plants, green waste, etc.)

A large rectangular text area with a vertical scrollbar on the right side, intended for a short description of biomass research.

biofuels (from oil seeds, corn, etc.)

A large rectangular text area with a vertical scrollbar on the right side, intended for a short description of biofuels research.

energy conversion and utilisation

A large, empty rectangular text box with a thin grey border. On the right side, there is a vertical scrollbar with a small square slider and arrowheads at the top and bottom.

Others

A large, empty rectangular text box with a thin grey border. On the right side, there is a vertical scrollbar with a small square slider and arrowheads at the top and bottom.
